

# Commitment Institutions and Electoral and Political Instability

## A Reduced-Form Approach

Isaac Liu

March 27, 2021

# Do the commitment institutions of central bank independence and fixed exchange rates affect electoral and political instability?

- ▶ Net Welfare Benefits
  - ▶ Inflation Time Inconsistency
  - ▶ Political efficacy, access to capital
  - ▶ Economic Voting, Increased Stability
- ▶ Political Business Cycles
  - ▶ Inability to manipulate economy or satisfy partisans
  - ▶ Monetary (perhaps fiscal) policy
  - ▶ Economic voting, Decreased Stability

## Can Trump fire Fed Chair Jerome Powell?

Adriene Hill, Janet Nguyen, and Daisy Palacios

Dec 24, 2018

- ▶ Bernhard and Leblang (2002)
  - ▶ OLS, 16 parliamentary democracies since 1970s
  - ▶ CBI increases cabinet duration by 3mos, Fixed rates by 5mos
- ▶ Clark, Golder, and Poast (2013)
  - ▶ Survival Analysis, 19 OECD countries since 1970s
  - ▶ Both institutions increase leader survival but only after 7y in office
- ▶ Contribution:
  - ▶ Far larger dataset including non/semi-democracies
  - ▶ More consideration of endogeneity: choice of institutions based on stability consideration, de jure independence
  - ▶ Political, not just electoral stability (coups, civil wars, etc), consideration for specific governmental positions

- ▶ Panel of 192 countries, 1970-2016
- ▶ Varieties of Democracy
  - ▶ V2elturnhos, v2eltturnhog, v2eltvrig
  - ▶ 0 for same individual, 1 for same party or coalition, 2 for new party & ind.
  - ▶ WGI Political Violence (neg = unstable)
  - ▶ Instability Event- coup, civil war, internal conflict
- ▶ Garriga (Cukierman, Webb, Neyapti)- de jure CBI
- ▶ Dreher et al.- Irregular turnover of governor- de facto CBI
- ▶ Reinhart, Rogoff Exchange Rates: 16 categories (higher = float)

- ▶ Separate regressions (bad control problem)
- ▶ FEs, clustered SEs
- ▶ De Jure CBI and more instability: PBCs
- ▶ De Facto CBI (high irregular turnover) and less lower chamber turnover
- ▶ Fixed rate and less HOS turnover
- ▶ Welfare Benefits of De Facto CBI, Fixed Rates?

# Fixed Effects Regression with Clustered Standard Errors

# Just Aggregate GDP for Fixed Rates

- ▶ Clearer case for fixed rates decreasing pol and electoral stability (PBC)
- ▶ Note on exclusion restriction: still an imperfect case
  - ▶ Agg GDP proxies for economy size (optimum currency area)
  - ▶ Arguably not as connected to GDP per capita to stability
- ▶ Result for lower house sensitive to dataset

# Aggregate GDP Instrument for Fixed Rates

**Table:** Instrument of Aggregate GDP for Fixed Exchange Rates, Robust Standard Errors

|              | (1)<br>L. H. Turnover | (2)<br>WB Pol. Stability |
|--------------|-----------------------|--------------------------|
| Fixed Rate   | 0.0779***<br>(3.35)   | -0.257***<br>(-4.13)     |
| Constant     | 0.0991<br>(0.58)      | 1.992***<br>(4.16)       |
| Observations | 835                   | 437                      |

*t* statistics in parentheses

\*  $p < 0.05$ , \*\*  $p < 0.01$ , \*\*\*  $p < 0.001$

# Table of Lags (see paper)

- ▶ Irregular central bank turnover instantaneously associated with lower chamber election turnover
- ▶ T-3 sees strongest de jure CBI political instability impact
- ▶ T-6, T-8 de jure CBI increases pol instability. T-8 reduces HOG turnover (electoral instability) (similar to Clark, Golder, and Poast).
- ▶ Fixed rates increase instability in the same T-6 and up range
- ▶ Little significance for de facto CBI/governor turnover
- ▶ Similar results with lagged ordinal logit specification

# Summary

- ▶ De jure CBI generally decreases (esp. pol) stability, suggesting limits on PBCs
- ▶ Sign unclear for governor turnover/de facto CBI
- ▶ Fixed exchange rates also increase electoral stability, but decrease political stability in FE & XTLogit models
- ▶ In IV and lag specifications fixed rates decrease all stability
- ▶ Commitment institutions politically costly, at odds with literature
- ▶ Robust results
  - ▶ Not covered: capital controls/openness don't matter, binary independent variables somewhat reduce effect sizes, interactions with democracy do not matter, institutional controls for federalism and corporatism do not affect signs or cause large changes in effects

- ▶ Diverging predictions for Head of Government, Head of State, Lower House Turnover
  - ▶ HOS and Lower House seem to have strongest relationships
- ▶ Endogenous elections
- ▶ Dynamic panel (A-Bond)?
- ▶ Ordinal logit regression with IV (different procedure)

## Additional Results/Checks

- ▶ Regional government exists and has autonomy and authority, checks and balances/horizontal accountability
- ▶ Not strictly necessary
  - ▶ FEs
  - ▶ No sign flips
- ▶ Omitted: Corporatism
- ▶ Collinearity?

# Controls Excluding Corporatism

**Table:** All Controls Excluding Corporatism, Fixed Effects and Clustered Standard Errors

# HOS = HOG?

- ▶ V2exhoshog is an indicator for whether HOS and HOG are the same person
- ▶ De jure CBI increases HOS turnover somewhat more when they are not the same person ???
- ▶ Weaker effect when they are
- ▶ Fixed erates reduce turnover in when they are the same person

# HOS = HOG Interaction Term
